Description

RCMS (Radio Control and Monitoring System) is designed to remotely access, monitor and control radio communication system. System worked with our product such as iSense (Power Watts Meter) ,iPS(Smart Power Supply) ,iGate(Radio Gateway) ,etc. Our can customize feature append on customer required. Any computer that has access to one or more of the RCMS servers, can access, monitor and control connected equipment by logging in to the server. The server and control store all information as it arrives from the devices contain a database with historical events. Databases stored on the server allow the generation of reports and historical statistic information reports to document the availability of the communication system.
